WSDA has developed a set of data tables and corresponding county maps that may be used to determine which Washington State waterways fall under the recent U.S. District Court order requiring [pesticide-specific](#) buffers on water bodies where salmon are ordinarily found.

Water bodies that require buffers are shown on the county maps. The county maps are general locators for reviewing the boundaries of a threatened or endangered salmonid ESU. An ESU or “Evolutionary Significant Unit” is a distinctive group of Pacific salmon or steelhead, referred to as salmonids.

To find out if a particular stream or river is subject to the court-ordered buffers:

1. Check Table 1 to see if the stream or river is listed. If it is not listed, buffers are not required.
2. If the stream or river is listed in Table 1, check Table 2 to find the area(s) of the stream or river where buffers are required. The areas requiring buffers are identified by township/range/section(s) and are listed in ascending order.

Lake shoreline sections were added if a stream or river passes through a lake located within a threatened or endangered salmonid ESU.

Estuarine areas are not included in the lists of township/range/section(s). However, the court-ordered buffers also apply to any estuary within a threatened or endangered ESU.

Although every effort was made to assure the accuracy of the data used to generate the tables and maps, it is possible that affected township/range/section(s) may have been inadvertently missed.

If you find an error in either the data tables or the county maps, please notify WSDA immediately by sending an e-mail to esp@agr.wa.gov describing the error.

The stream data used to generate these tables is from [StreamNet](#). StreamNet is maintained by the Pacific States Marine Fisheries Commission.

For background information on the court-mandated buffers, see [Washington Toxics Coalition, et al., v. EPA](#) .
